

Yash Gulati

Application Security Engineer | Secure SDLC & Vulnerability Remediation

Delhi, India · +91-9205538227 · contactyashgulati@gmail.com
linkedin.com/in/yashgulatii · github.com/yashgulatii · yashgulatii.pages.dev

PROFESSIONAL SUMMARY

Application security professional pursuing AppSec Engineer roles, with a responsibly disclosed CVSS 8.9 Broken Access Control/IDOR finding remediated end-to-end in a live production application, a black-box VAPT engagement against MobiKwik web assets with a CVSS-scored formal report, and hands-on OWASP Top 10 implementation work spanning both vulnerable and hardened code. CNSP Certified · Google Cybersecurity Certified · Microsoft SC-200 in progress, exam scheduled July 26, 2026.

TECHNICAL SKILLS

Web App Security: OWASP Top 10, Broken Access Control, IDOR, SQL Injection, XSS, Auth Bypass, Session Hijacking, CVSS Scoring

Secure Development: Secure SDLC, Root-Cause Analysis, Remediation Verification, RBAC Design, Input Validation

Testing Tools (DAST): Burp Suite, OWASP ZAP, SQLMap, Nmap

Cryptography & Networking: AES-256, RSA-2048, TLS/HTTPS, TCP/IP, DNS

Scripting & Platforms: Python (advanced), Bash, Flask, Firebase Auth, SQLite, Linux

PROFESSIONAL EXPERIENCE

Cybersecurity & Ethical Hacking Intern · Tamizhan Skills – RISE Program, New Delhi

June – July 2025

- Demonstrated the measurable security delta between vulnerable and hardened code — mapped 5 live OWASP Top 10 attack vectors to documented mitigations in DualAuth (SQL injection, auth bypass, session hijacking, brute-force) — built parallel vulnerable/secure authentication flows in Python with before/after analysis
- Shipped 7 additional security tools in Python — 100% open-source and documented on GitHub — independently designed and coded each during a 2-month internship

PROJECTS

CampusTrack – Secure Cross-Platform College Management System

Aug 2025 – May 2026

Flask · Firebase Auth · SQLite · Python · Linux · Role-Based Access Control

- Closed a critical access-control flaw before it reached a wider exploit surface — remediated a CVSS 8.9 Broken Access Control/IDOR finding across a live RBAC system with 100+ active users — performed root-cause analysis, redesigned Firebase security rules, and verified the fix through proof-of-concept retesting
- Reduced ongoing exposure on a production system — deployed automated log monitoring across a live Ubuntu Linux server — architected a Flask REST API backend with RBAC, parameterised queries, and input validation

DualAuth – Vulnerable vs. Secure Authentication Platform

June 2025

Python · SQL · OWASP Top 10

- Built a controlled demonstration of OWASP Top 10 risk reduction — 5 live attack vectors mapped to documented mitigations — engineered parallel vulnerable and secure implementations in Python and SQL

VAPT Assessment – MobiKwik Web Assets [Interview Assignment]

March 2026

Black-box Penetration Testing · CVSS Scoring · Formal Report Writing

- Delivered an external validation of application security posture — formal CVSS-scored report with PoC and remediation guidance across *.mobiwik.com web assets — structured a black-box assessment around the OWASP Top 10 attack surface within a 2-day window

Chakravyuha – Active Directory Purple Team Lab [In Progress]

2026 – Present

Windows Server 2022 · MITRE ATT&CK · Sigma

- Extended secure-design thinking beyond the application layer into identity infrastructure — modeled 9 MITRE ATT&CK techniques across a 6-VM Active Directory environment — designed detection rules and documented attack-to-defense mappings in a 9-part technical series

CYBERSECURITY ACHIEVEMENTS

TryHackMe — tryhackme.com/p/yashgulatii

2024 – Present

Top 2% Globally · Rank 31,908 · 192 Rooms Completed · 22 Badges

- Validated fundamentals across the application and infrastructure security stack — Top 2% global TryHackMe ranking (192 rooms, 22 badges) — completed SOC Level 1, Junior Penetration Tester, and Cyber Security 101 paths since 2024

EDUCATION

B.Sc. (Honours) Electronic Science · Rajdhani College, University of Delhi · 2022 – Present

CERTIFICATIONS

- Microsoft SC-200: Security Operations Analyst Associate — In Progress, exam scheduled July 26, 2026
- Google Cybersecurity Professional Certificate · Google, 2024 — Linux administration, secure coding, network security, incident response
- Certified Network Security Practitioner (CNSP) · The SecOps Group, 2024
