## SUMMARY

Entry-level security candidate targeting SOC Analyst and detection roles. Built a 6-VM Active Directory purple team lab with Sigma rules for 9 MITRE ATT&CK techniques, found and fixed a CVSS 8.9 IDOR in a self-built app with 100+ beta users, and delivered a CVSS-scored black-box VAPT report for MobiKwik web assets. TryHackMe top 2% globally. Google Cybersecurity Certificate and CNSP.

## TECHNICAL SKILLS

**SIEM & Detection:** Splunk, ELK Stack (Elasticsearch, Logstash, Kibana), Wazuh, Sigma rule writing, MITRE ATT&CK, MITRE Engage, IDS/IPS concepts, log analysis, alert triage
**Active Directory & Identity:** Active Directory, Kerberos, LDAP, NTLM, Group Policy, Tier 0/1/2 admin model, BloodHound
**Security Tools:** Wireshark, Nmap, Burp Suite, Metasploit, Hydra, John the Ripper, Kali Linux
**Scripting & Platforms:** Python, Bash, PowerShell, SQL, Linux, Windows Server 2022, VMware Workstation Pro, Git, GitHub, Flask, Firebase Auth, SQLite

## PROJECTS

**Chakravyuha: Active Directory Purple Team Lab** *chakravyuha.tech*
*Windows Server 2022, VMware Workstation Pro, Wazuh, Splunk, Sigma*

- Built a 6-VM Active Directory lab on VMware Workstation Pro using the Tier 0/1/2 model, with Windows Server 2022 domain controllers and workstations.
- Onboarded Wazuh agents across the domain controllers and workstations for central log collection.
- Wrote Sigma detection rules covering 9 MITRE ATT&CK techniques, including Kerberoasting, DCSync and BloodHound ACL abuse.
- Added a deception layer of honey accounts and canary tokens to alert on credential hunting.
- Documenting the build, telemetry and detection logic in an ongoing technical series at blog.chakravyuha.tech.

**CampusTrack: Secure Cross-Platform College Management System**
*Flask, Firebase Auth, SQLite, Python, Linux*

- Built a cross-platform academic portal with Flask and SQLite, using role-based access control.
- Found a CVSS 8.9 Broken Access Control/IDOR (BOLA) vulnerability in the live app (100+ beta users) and fixed it with server-side re-authorization on every request. Documented the PoC, root cause and remediation.
- Wrote role-scoped Firebase security rules to block unauthorized API endpoint modifications.
- Wrote Bash scripts to audit access logs and flag unauthenticated path traversal attempts.

**VAPT Assessment: MobiKwik Web Assets** *2-day engagement*
*Black-box penetration testing, CVSS v3.1, report writing, Nmap, Burp Suite*

- Ran an authorized black-box assessment of *.mobikwik.com web assets as a hiring assignment, within a 2-day window.
- Did active and passive reconnaissance with Nmap and OSINT tools to identify exposed public-facing services.
- Scored each finding with CVSS v3.1 and delivered a formal report with validated PoCs and remediation recommendations.

## EXPERIENCE

**Tamizhan Skills, RISE Program: Cybersecurity & Ethical Hacking Intern** *June – July 2025*

- Built and open-sourced 7 Python security tools on GitHub: Netra (network scanner), AirTrace (Wi-Fi recon), EnChat (AES-256/RSA-2048 encrypted messaging), DualAuth (SQL injection demo), SimLock (ransomware simulation), KeyScope (keystroke logger), EntropyX (password entropy evaluator).
- Applied TCP/IP, HTTP/S and 802.11 knowledge while building the tools, and used Wireshark to analyze packet captures and traffic logs.
- Ran Nmap and Burp Suite scans against test targets and documented the attack paths.

## TRAINING & PRACTICE

**TryHackMe** *2024 – Present*

- Top 2% globally; 192 rooms completed and 22 badges.
- Completed the SOC Level 1, Junior Penetration Tester and Cyber Security 101 learning paths (log analysis, alert triage, packet capture investigation).

## EDUCATION & CERTIFICATIONS

**Rajdhani College, University of Delhi** *2022 – 2026*
*B.Sc. (Honours) Electronic Science, New Delhi*
**Coursework:** Network Security, Computer Networks, Operating Systems, Information Security, Cryptography, Digital Electronics
**Google Cybersecurity Professional Certificate**, Google *2024*
**Certified Network Security Practitioner (CNSP)**, The SecOps Group *2024*
